# Wash Bottle

## TECHNICAL DATASHEET

## DESCRIPTION

Our bottles have been produced using a new process utilising a concentrate that does not contain any Exthoxylated Tertiary Amine, which is widely used as an antistatic agent. These bottles have an average surface resistivity of  $10^9$  to  $10^{10}$  Ohms/sq.

These bottles will dissipate a static charge of  $\pm 5000V$  in less than two seconds at 40% relative humidity. By their chemical nature, they will not have any chemical reactivity with solvents such as TCE or alcohol.
